

SpyCatcher Magnetic beads

Summary

Catalog No	086-101-003
Ligand	SpyCatcher
Bead size	~ 2.8 μ m
Reactivity	Highly selective for SpyTag-fusion protein
Binding capacity	High binding capacity, 10 μ L slurry bind about 20 μ g of SpyTag-fusion protein
Storage	Shipped at ambient temperature. Upon receipt store at 4°C. Stable for 1 year. Do not freeze
Storage buffer	50 % slurry in PBS containing 20 % Ethanol

Description

SpyCatcher Magnetic beads have been specifically designed to bind SpyTag-fusion proteins. SpyCatcher Magnetic beads are based on Spycatcher covalently coupled to the surface of magnetic beads, and they are used to detect and isolate SpyTag-fusion proteins efficiently.

Background

The SpyCatcher-SpyTag system was developed seven years ago as a method for protein ligation. It is based on a modified domain from a *Streptococcus pyogenes* surface protein (SpyCatcher), which recognizes a cognate 13-amino-acid peptide (SpyTag). Upon recognition, the two form a covalent isopeptide bond between the side chains of a lysine in SpyCatcher and an aspartate in SpyTag. This technology has been used, among other applications, to create covalently stabilized multi-protein complexes, for modular vaccine production, and to label proteins. The SpyTag system is versatile as the tag is a short, unfolded peptide that can be genetically fused to exposed positions in target proteins; similarly, SpyCatcher can be fused to reporter proteins such as GFP, and to epitope or purification tags.

Application notes

Immunoassay
 Immunoprecipitation
 cell sorting

Benefits

- High binding capacity
- Low non-specific binding
- Minimal sample loss
- Ready to use.
