

pComb3XTT

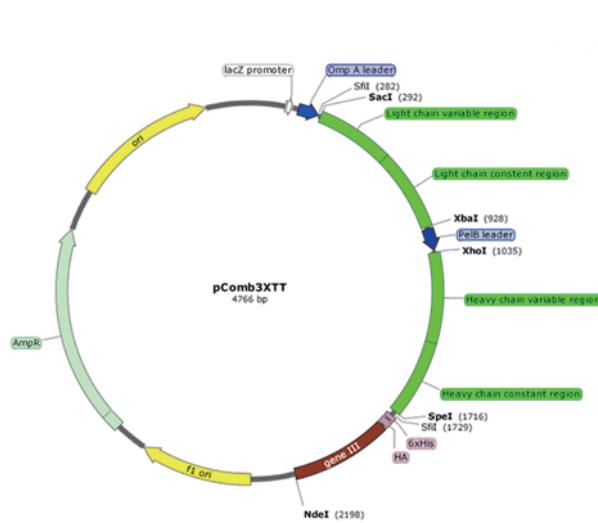

Summary

Code	P002
Bacterial Resistance(s)	Ampicillin
Growth Temperature	37°C
Growth Strain(s)	TG1
Copy number	High Copy
Insert Size (bp)	1600
Promoter	lacZ
Tags / Fusion Proteins	<ul style="list-style-type: none"> *6x His (C terminal on backbone) *HA tag (C terminal on backbone) *genell1 (C terminal on backbone)
5' sequencing primer	5'-AAG ACA GCT ATC GCG ATT GCA G-3'
3' sequencing primer	5'-GCC CCC TTA TTA GCG TTT GCC ATC-3'

Description

pComb3X is the newest of the pComb vectors. Improvements over pComb3 include increased stability and introduction of an asymmetric Sfi cassette for directional cloning of full Fab, scFv, peptide and other protein for phage display. 6xHis and HA tags allow for purification and detection. An amber stop codon was introduced to turn-off expression of the pIII fusion protein by switching to a non-suppressor strain of E. coli allowing production of soluble protein without subcloning. Alternatively, the gene for phage protein pIII can be removed by Spel/Nhel digest. The "TT" refers to the human Fab to tetanus toxin which can be used as a template to amplify the kappa light chain constant region and Fd for construction of chimeric antibody libraries.
